In the claims:

- 1-12 (canceled)
- 13. (currently amended). A membrane for use in conjunction with a semiconductor carrier which comprises:
- (a) an electrically insulating substrate <u>removably securable</u> for application to a semiconductor carrier;
 - (b) an interconnect pattern on said substrate; and
- (c) a stud coupled to said interconnect pattern on said substrate, said stud comprising a gold ball and an electrically conductive compliant material coating over a portion of said gold ball opposed to said substrate.
- 14. (previously presented) The membrane of claim 13 wherein said gold ball is the ball of a ball bond on said substrate.
- 15. (previously presented) The membrane of claim 13 wherein said coating is a compliant epoxy resin.
- 16. (previously presented) The membrane of claim 14 wherein said coating is a compliant epoxy resin.
- 17. (previously presented) The membrane of claim 15 wherein said compliant material is filled with a material having sufficient hardness to be capable of penetrating the oxide film on the contact pads of semiconductor devices.

- 18. (previously presented) The membrane of claim 15 wherein said compliant material is filled with a material having sufficient hardness to be capable of penetrating the oxide film on the contact pads of semiconductor devices.
- 19. (previously presented) The membrane of claim 17 wherein said material is silver or silver-based flakes.
- 20. (previously presented) The membrane of claim 18 where the material is silver or silver-based flakes.
